Kid Proof

Silicon Baby Temples

Parents know perfectly that each baby and child are totally different in their physique and their behavior. Therefore, the new prescription glasses "Silicon Baby and Silicon Baby II" get the best adjustment for each one of them with a different concept: **two frames in one.**

Silicon Baby children's glasses include two systems to fit all situations:

=> **Fixing by temples:** With this classic system the child begins to adapt to the use of glasses.

=> **Fixing by band:** With this system we could replace the temples for a neoprene head-band for better comfort and tight fit.

All models "Silicon Baby & Baby II" include:

Two frames in one:

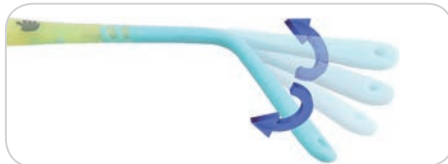

With band

With temples

Silicon Baby II rubber soft temples

In the Silicon Baby II, temples are adjusted with simple pressure. The

temples tips are made of a ultra-soft material for better comfort of children.

mini-band to better adjust

rounded design

Sizes 34, 36, 38 y 41

Morphology & design of glasses

=> **Rounded design:** Designed for babies and kids. This form ensures better centering of the pupils and extends the field of vision, especially higher because babies see "the world" from below and need larger field of view at the top of the glasses.

rectangular design

Sizes 38, 41 y 43

Morphology & design of glasses

=> **Rectangular design:** Thought for major children, since now they are capable of centering better its vision and this form adapts itself to bigger faces.
